

ML Model Deployment using Python & Flask

Beingdatum

Agenda

- 01** Introduction to Flask
- 02** Getting Started: Installing & Working with Flask
- 03** Concepts: Overview of all concepts in Flask
- 04** Use Cases
- 05** Practical Approach: Model Deployment using Flask

Introduction to Flask

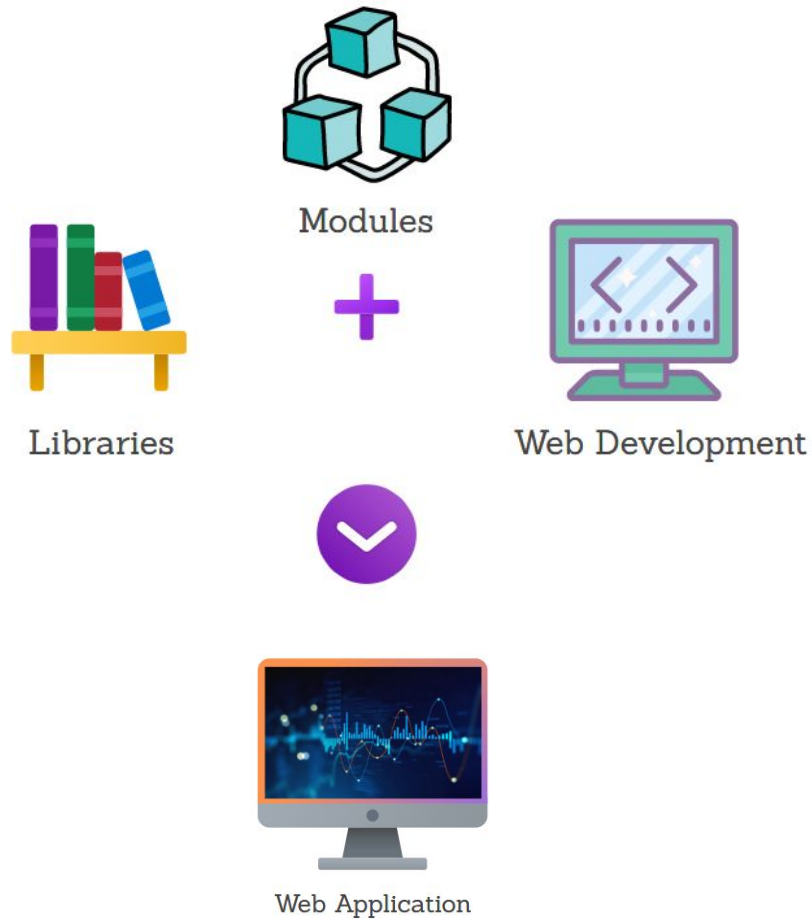

What is Flask?

Flask is a web application framework written in Python

Web Framework

What is a web framework?

Flask Installation

pip install Flask

Flask - Application

```
from flask import Flask

app = Flask(__name__)

@app.route('/')
def func1():
    return 'Hello World'

if __name__ == '__main__':
    app.run()
```

I'm learning Flask!!

Flask - Application

Flask - Application

Debug Mode

Flask application is started by calling the run() method

```
* Serving Flask app "test" (lazy loading)
* Environment: production
  WARNING: Do not use the development server in a production environment.
  Use a production WSGI server instead.
* Debug mode: off
* Running on http://127.0.0.1:5000/ (Press CTRL+C to quit)
```

How to enable Debug?

```
* Serving Flask app "test" (lazy loading)
* Environment: production
  WARNING: Do not use the development server in a production environment.
  Use a production WSGI server instead.
* Debug mode: on
* Restarting with stat
```

```
app.debug=True
app.run()
app.run(debug=True)
```

SET FLASK_DEBUG=1 (Anaconda Prompt)

Flask - Routing

Route() decorator

route() decorator in Flask is used to bind URL to a function

Example

```
@app.route('/')  
def hello():  
    return 'Hello World'
```

add_url_rule() function is also used to bind URL with function

Flask - HTTP methods

HTTP Protocols are the foundation for data communication in WWW

Sl. no.	Method	Description
1	GET	Sends data in unencrypted form to the server
2	HEAD	Same as GET, but without response body
3	POST	Used to send HTML form data to the server
4	PUT	Replaces all current representations of target resource with uploaded content
5	DELETE	Removes all current representations of target resource given by URL

Flask - Errors

Standardized status codes

Sl. no.	Code	Description
1	400	Bad Request
2	401	Unauthorized
3	403	Forbidden
4	404	Not Found
5	406	Not Acceptable
6	415	Unsupported Media Type
7	429	Too Many Requests

Let's build some web apps

THANK YOU
